PROFESSIONAL SUMMARY

Motivated B.Tech Computer Science student and aspiring Game Developer with practical indie studio experience in Unity (C#) and C++. Skilled in refactoring systems, debugging gameplay mechanics, and keeping codebases maintainable as a game grows.

EXPERIENCE

Unity Developer Intern

Rural Games (Indie Game Studio) | Remote | July 2026 – Present

- Working on gameplay scripting in Unity, helping keep the codebase clean as the game grows.
- Most of the work involves refactoring systems so the team can build on them more easily, and fixing bugs that come up during playtesting.

PERSONAL PROJECTS

Arena Survivor | Unity 6, C#, C++, Firebase

- Scalable multiplayer arena game for 4–8 players plus 20 AI bots, built with Unity 6, Netcode for GameObjects, Unity Gaming Services, and Firebase.
- Includes a C++ native A* pathfinding plugin integrated into Unity via DllImport that is roughly 2x faster than the equivalent C# implementation.

Obstacle Avoidance Game (Endless Runner) | Unity, C#

- Developed a 3D endless runner where the player navigates a vehicle through oncoming traffic, focusing on smooth player controls and reactive collision detection.
- Implemented a dynamic object spawning system to continuously generate obstacles, testing and refining the difficulty curve for player engagement.

Cube Runner & Snake Game | Unity, C#

- Built core gameplay loops for 2D and 3D prototypes, handling player input, score tracking, and game-over states.
- Gained hands-on experience with Unity's physics engine, rigidbodies, and basic UI integration for menus and point displays.

Brick Breaker & Pong | Unity, C#

- Two entries in a warm-up project series — classic brick-breaker and Pong built from scratch to practice core Unity patterns: collisions, paddle physics, ball physics, score tracking, and level progression.

Alien Shooter | Unity, C#

- Early-stage 2D platformer prototype — exploring 2D level design, enemy AI, and platformer character controllers in Unity.

EDUCATION

B.Tech in Computer Science and Engineering

Haridwar University (Roorkee College of Engineering), Roorkee, Uttarakhand

Expected Graduation: 2027 | Aggregate: 78%

- Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks.

SKILLS

- Programming: C# (Unity), C++, Python
- Game Engine: Unity
- Multiplayer & Backend: Netcode for GameObjects, Unity Gaming Services, Firebase
- Version Control & DevOps: Git, GitHub, GitHub Actions
- Design Tools: Blender (Basic Fundamentals)
